

Exercise set 6 - SQL basics 5

- Ocelot exercise database presented in SQL basics 1 will be used in this exercise
- Return exercise in .txt format and use formatting presented below (question always followed by the query)

```
-- Select all employees from table  
SELECT * FROM EMPS;
```

Important: This exercise requires that SALARIES table is created (done in previous exercise set)!

1. Insert two new rows for SALARIES table:
 - 3500 euros for employee 10
 - 3300 euros for employee 20
2. Change the salary for employee 20 so that it will be 3600 euros.
3. Create a new table called **SALARYHISTORY** with similar structure as **SALARY** table.
4. Copy the content of SALARY table to SALARYHISTORY with one query.
5. Remove the salary information of employee 20 from SALARY and SALARYHISTORY tables.
